SOME CHARACTERISTICS OF HUSBANDS AND WIVES
AS INDICATED IN THE CENSUS
AND VITAL STATISTICS

A study of certain characteristics of Canadian husbands and wives was recently made by the Social Analysis Section of the D.B.S. by means of a 5 per cent sample of 1941 Census Schedules. In addition to its intrinsic value, the study had two main objectives:-

1. To see to what extent data concerning husbands and wives, obtainable through the Census, corroborated data concerning bridegrooms and brides recorded from marriage records.
2. To aid the Committee planning the 1951 Census Tables in deciding whether or not the inclusion of additional Tables on husband-wife relationships would be justified as providing socially significant data not heretofore available.

The tables are largely self-explanatory. However, brief reference to a few of the more important features appears below.

AGE

Young men marry women whose ages approximate their own. Older men tend to marry women much younger than themselves. For 25-year-old bridegrooms, the bride is, on the average, about 2 years younger; for those 35 years old, 6-7 years younger, for those 45 years old, 8-10 years younger, and for those 60-64 years old, 11-12 years younger. Over the 20 year period 1926-46, there was a slight upward trend in the average age of bride in relation to the age of bridegroom for bridegrooms over 20 years of age - e.g. for 35-year-old bridegrooms the bride was, on the average, a year older in 1946 than in 1926.

Since wives are, in general, younger than husbands, it follows that there will be more widows than widowers and this trend is further accentuated by the relatively greater longevity of females. This fact is important in connection with employment opportunities for older women, with social provisions for the care of the aged, and so on.

YEARS OF SCHOOLING

Canadian wives are, on the whole, better educated than their husbands. A comparison of years of schooling of husbands and wives for marriages of under 10 years and those of 10 or more years duration reveals that this tendency is more pronounced in the case of more recent marriages. However, the educational status of both husbands and wives is rising.

Social studies have established the fact that approximate equality of educational status of the partners contributes to the success and stability of marriage. Wide differences are likely to affect attitudes towards the education of the children and other social problems.

BIRTHPLACE

There is a strong tendency for persons to marry those born in the same locality as themselves, depending, of course, on the extent to which partners of the opposite sex, and at suitable ages, are available.

In the marriages taking place during the years 1931-40, 90 per cent of bridegrooms born in Quebec and 80 per cent of those born in Ontario married Quebec-born and Ontario-born brides respectively. Similarly, 70 per cent of bridegrooms born in Finland married Finnish-born brides. For Hungary, the corresponding figure was 49 per cent, and for Poland, 48 per cent.

RELIGION

There is a strong tendency for persons of the same religion to marry. For instance, in the marriages taking place during the years 1931-40, 96 per cent of Jewish bridegrooms had Jewish brides and 92 per cent of Roman Catholic bridegrooms had Roman Catholic brides.

Identity of religion tends to override other differences which form barriers to the intermarriage of peoples of different cultural backgrounds. Hence, it is an important factor in hastening the assimilation of persons of different ethnic origins.

When marriages take place between persons of different religious denominations, there is a strong tendency for the husband or the wife to adopt the religion of the partner, the census reveals. In the case of every denomination, the proportion of husbands and wives married less than 10 years reporting the same religious denomination at the 1941 Census was higher and, in most cases, much higher, than the proportion of bridegrooms and brides 1931-40 reporting the same denomination.

TABLE 7.- AVERAGE AGE OF WIFE, COMPARED WITH AGE OF HUSBAND FOR MARRIAGES OF SPECIFIED DURATION

Source: 5% Sample, 1941 Census

Age of Husband	Average Age of Wife			
	Marriages Under 10 Yrs.	Marriages 10-19 Yrs.	Marriages 20-29 Yrs.	Marriages 30 Yrs. & Over
15 - 19	19.1	-	-	-
20 - 24	22.3	-	-	-
25 - 29	25.5	30.2	-	-
30 - 34	28.5	32.0	-	-
35 - 39	30.9	35.2	40.4	-
40 - 44	33.0	38.1	42.4	-
45 - 49	35.8	40.3	45.3	51.9
50 - 54	38.7	42.3	48.3	52.7
55 - 59	41.3	45.2	50.8	55.8
60 - 64	43.3	48.7	53.0	59.3
65 - 69	48.0	51.8	55.6	63.3
70 - 74	49.9	53.2	58.4	67.5
75 +	55.5	58.7	61.2	73.2

Note: It should be remembered that men of, say 45-49, who had been married 20-29 years had been married at the most common ages of marriage when the disparity between age of groom and of bride tends to be less than in the case of men of this age group who had been married under 10 years.
